

IN THE SPECIFICATION

The Examiner objected to the disclosure in pages 7-13 of the Applicant's Specification, as allegedly being essentially prior art. Consequently, the Examiner requires that descriptions referring to Figures 1-4(a) should appear in the section entitled "Background of the Invention" rather than "Description of the Preferred Embodiment" section. The Applicant respectfully disagrees.

The Examiner's objections to the Specification are improper. In particular, Applicant respectfully submits that disclosure of Figures 1-4(a) in the "Description of the Preferred Embodiment" section at pages 7-13 describes an exemplary mobile IP environment in which the present invention may be utilized. Accordingly, to construe this written description to be prior art is in an error because it would undermine the written description requirement for the disclosure of the embodiments of the instant patent application. For the aforementioned reasons, reconsideration of the objections to the Specification is respectfully requested.
